Roles & Access — Pages, Data Visibility and Permissions

المنصة الحكومية لتخطيط ومتابعة مشروع الذكاء الاصطناعي المساعد

Document 2 of 2 · Prepared for the IT team (role mapping & access control)
Version 1.0 · July 2026 · Companion documents: HANDOVER.md,
DEPLOYMENT.md, Architecture & Data Flow (PDF)

1. The five roles

Every user belongs to exactly one role (**users.role** → FK **roles.key**). The delivered build opens as **ممثل الجهة** by default (**NEXT_PUBLIC_DEFAULT_ROLE**); in production the role comes from the sign-in mapping against the **users** table. Four roles operate the item workflow; the fifth, **مشرف النظام** (admin), is a platform-level role that manages accounts and roles — see §5. All scoping below is enforced centrally in the view-model — one place decides what each role sees.

Role	Arabic	Who	Scope of data
System administrator	مشرف النظام	The platform administrator (manages users & roles)	The admin console — users, roles, stream-head & committee assignment (not the item workflow)
Coordinator	منسق المسار في الجهة	The entity employee who enters the data for ONE stream	Own entity + own stream — including drafts
Entity representative	ممثل الجهة	The entity's official approver	Own entity, all streams — submissions onward (never drafts)
Stream head	رئيس المسار	Predefined national owner of one stream (5 officials)	Own stream across ALL entities — approved items only
National committee	اللجنة الوطنية	The national funding committee	Everything approved, across all entities and streams

Visibility model

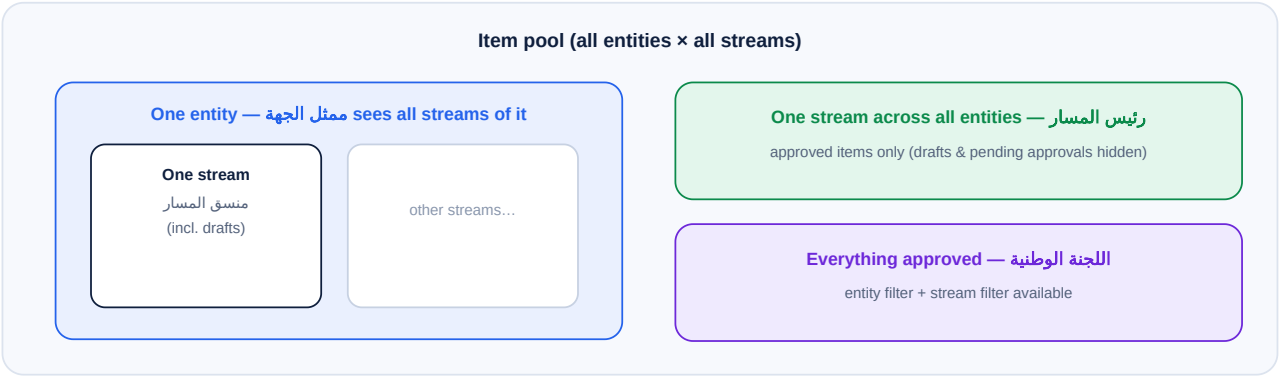

Fig. 1 — Data scoping per role

2. Pages & screens matrix

Page / panel	منسق المسار	ممثل الجهة	رئيس المسار	اللجنة الوطنية
Sign-in (UAE PASS)	✓	✓	✓	✓
Team setup wizard (تسجيل فريق العمل)	—	✓ (rep email mandatory)	—	—
Dashboard (لوحة المتابعة)	✓ own stream	✓ own entity	✓ own stream	✓ national
Add item wizard — manual (5 steps)	✓	—	—	—
Bulk upload (workplan .xlsx)	✓	—	—	—
Launch plan manager (إدارة خطط الإطلاق)	✓	—	—	—
Bulk assign to مرحلة (select cards)	✓	—	—	—
Item detail page	✓	✓	✓	✓
Approve / return with notes	—	✓	—	—
Update execution / launch status	✓	—	—	—

Notifications	✓	✓	✓	✓

Program progress banner

The three-phase program banner (with countdown) is shown to **منسق المسار** and **ممثل الجهة** only — oversight roles (رئيس المسار، اللجنة الوطنية) see their analytics instead.

Purpose: the data owner. Creates and maintains every item of ONE stream inside their entity and plans the launches.

Pages seen

- **Dashboard** — stream-scoped: totals row (إجمالي، المشاريع/المبادرات، العمليات/الخدمات as applicable to the stream), percentages row (الأنشطة، الأتمتة، المكتمل), per-مرحلة summary (items · عمليات · execution cost · each launch with its budgets), item cards/list.
- **Add wizard** — method (manual / bulk) → type (per stream: everywhere مشروع/مبادرة; عملية in الدعم المؤسسي والعمل and العمل) → 5 steps ending with الإصدار (مرحلة + launch plans + وضع العنصر). (الخدمات in الحكومي الاستراتيجي; خدمة).
- **Bulk upload** — the official workplan Excel; parsed rows reviewed before submission.
- **إدارة خطط الإطلاق** — collapsible launches per مرحلة: name, type, date, attached items, derived execution budget (read-only), manual launch budget, scope.
- **Item detail** — full data; can edit drafts, update execution checklist and launch completion.

Data visible

- Only items of **their entity AND their stream** — including drafts and returned items (بحاجة إلى تعديل).
- Execution budgets and launch budgets of their stream's launch plans.
- Funding outcome (معتمد للتمويل) — but **not** the nomination activity of رئيس المسار.

Actions

- Create / edit / submit items (name mandatory; scope + execution budget mandatory at submission).
- Delete drafts and **withdraw & delete** submissions not yet approved (سحب وحذف).
- Manage launch plans; attach/detach items (one مرحلة per item); bulk-assign selected cards to a مرحلة.
- Update execution checklist status and mark launches done (completes the item).

Purpose: the entity's official gate. Approves what the coordinators submit and tracks the entity's whole portfolio and costs.

Pages seen

- **Team setup wizard** (first sign-in) — entity fixed from UAE PASS; rep name, **email (mandatory)**, phone; stream owners in the official stream order.
- **Dashboard** — entity-wide: totals row with per-stream distribution inside the **المبادرات/المشاريع** and **العمليات** cards (zeros shown), percentages row + **ميزانية التنفيذ التقديرية** and **ميزانية الإطلاق التقديرية (للاطلاع)**, per-مرحلة summary with each launch's budgets, cards/list.
- **Item detail** — read-only data view with the full audit log and approval actions.
- **Team panel + program deadlines editor.**

Data visible

- All streams of **their entity**, from submission onward — drafts are never visible.
- Both cost figures: execution totals (what the committee counts) and launch totals (awareness only).
- Funding outcomes; **not** the nomination pipeline.

Actions

- **Approve** a submission (اعتماد) → item becomes **المخطط · المرحلة N**.
- **Return with notes** (إعادة بملاحظات) → item goes back to the coordinator as **بحاجة إلى تعديل**.
- Maintain the team and program deadlines; export the entity portfolio.

Purpose: national owner of one stream. The five heads are predefined officials (names/titles shipped in the app; accounts linked by IT).

Pages seen

- **Dashboard** — their stream across all entities, with an entity filter; KPI cards relevant to the stream.
- **Item detail** — read-only, full data of approved items.
- **Nomination basket** (سلة الترشيحات) — their nominations awaiting the committee.

Data visible

- Only **approved** items (drafts and pending entity approvals are hidden) of their stream, across all entities.
- Execution budgets; nomination and funding status of their stream's items.

Actions

- Select items → **ترشيح للتمويل** (nominate to the committee); withdraw own nominations before funding.

4 اللجنة الوطنية — National committee

Purpose: national oversight and funding against the approved 100M AED budget.

Pages seen

- **Dashboard** — national analytics: participating entities, totals, pending/funded counts, average transformation score (with the scoring formula tooltip), the budget bar (approved / spent / remaining / utilisation), recommendation classification (موصى به / قائمة الانتظار / غير موصى به), stream + entity + status filters.
- **Committee basket** — items nominated by رؤساء المسارات and the funded list with total cost.
- **Item detail** — read-only, full data + audit log.

Data visible

- Everything **approved**, across all entities and streams (drafts and pending approvals hidden).
- All execution budgets; spent = sum of funded items' execution budgets only (launch budgets never counted).

Actions

- **Fund** nominated items (or fund directly); **decline** nominations; **cancel funding with a mandatory reason** (the entity is notified).

5. Field-level visibility rules

Data	منسق المسار	ممثل الجهة	رئيس المسار	اللجنة الوطنية
Drafts (مسودة / حاجة إلى تعديل)	✓	—	—	—
Pending approvals (بانتظار اعتماد ممثل الجهة)	✓	✓	—	—
Item execution budget	✓	✓	✓	✓
Launch budget (informational)	✓	✓	—	—
Nomination activity (who nominated)	—	—	✓	✓
Funding outcome (معتمد للتمويل)	✓	✓	✓	✓
Committee budget bar (100M)	—	—	—	✓
Audit log (item history)	✓	✓	✓	✓
Other entities' data	—	—	own stream only	✓

Note: role enforcement is currently presentation-layer (single state API). Before opening the platform to multiple tenants, transitions should be re-checked server-side per role — see docs/it-handover.md.

A مشرف النظام — System administrator

Purpose: the platform-level role. Manages all accounts and roles and, specifically, assigns the stream heads (رؤساء المسارات) and national committee (اللجنة الوطنية). Coordinators are provisioned by each entity rep in team setup — not by the admin. The admin does not take part in the item workflow.

Admin console (لوحة المشرف)

- المستخدمون — every account in one table with a role filter; add / edit / activate-deactivate / delete. Seeded reference accounts (committee, stream heads) are protected from deletion.
- رؤساء المسارات واللجنة — assign the رئيس المسار for each of the five streams and manage اللجنة الوطنية members.
- الأدوار والصلاحيات — reference cards for all five roles with scope and the roles.permissions capability list.

Provisioning split (who creates whom)

Account	Provisioned by	Where
Stream heads (رئيس المسار)	مشرف النظام	Admin console → رؤساء المسارات
National committee (اللجنة الوطنية)	مشرف النظام	Admin console → اللجنة
Entity representative (ممثل الجهة)	مشرف النظام	Admin console → المستخدمين
Coordinators (منسق المسار في الجهة)	ممثل الجهة	Team setup (تسجيل فريق العمل)

Capabilities (roles.permissions)

users.manage · roles.view · streamhead.assign · committee.assign

In production the admin is reached by a **users** row with role='admin' (mapped from UAE PASS); the demo exposes it through the role-switcher. The admin role and an admin@aigp.gov.ae starter account are created by migration 0008 and the seed.
